A CRM APPLICATION FOR THECHAISHOP&CO

Introduction

Customer Relationship Management (CRM) systems play a vital role in helping businesses manage interactions with customers, improve service quality, and build long-term relationships. For a growing beverage business like **TheChaiShop&Co**, an efficient CRM application can significantly enhance how customer data, orders, feedback, and loyalty programs are handled. As the number of customers increases, managing information manually becomes difficult, leading to delays, errors, and missed opportunities to engage with customers effectively.

The CRM application for **TheChaiShop&Co** is designed to centralize customer information and streamline daily operations. It helps the business store customer details, track purchase history, manage orders, and monitor customer preferences in one integrated platform. By organizing this data, the application enables the company to provide personalized services, offer targeted promotions, and respond quickly to customer needs.

Additionally, the system assists in improving customer retention by maintaining records of feedback and loyalty rewards. It also helps the management analyze sales trends and customer behavior, which supports better decision-making and business growth strategies.

Overall, the CRM application aims to improve operational efficiency, strengthen customer relationships, and support the long-term growth of **TheChaiShop&Co**. By adopting this digital solution, the company can deliver a more organized, responsive, and customer-focused service experience.

1.1 Project Overview

The CRM application for **TheChaiShop&Co** is designed to improve the way the business manages its customer relationships, sales activities, and daily operations. As the business grows, handling customer information, orders, and feedback manually becomes inefficient and time-consuming. This project focuses on developing a centralized digital system that allows the company to organize and manage customer data in a structured and efficient manner.

The main purpose of this CRM system is to store and manage customer details, track purchase history, manage orders, and record customer preferences. By maintaining this information in a single platform, the application helps the business provide better customer service and personalized experiences. Staff members can easily access customer information, respond to inquiries quickly, and ensure accurate order management.

The system also supports features such as customer feedback tracking, loyalty program management, and sales monitoring. These features help the management understand customer behavior, identify popular products, and make better business decisions. In addition, the CRM application improves communication between the business and its customers through organized records and timely updates.

Overall, this project aims to enhance operational efficiency, improve customer satisfaction, and support the sustainable growth of **TheChaiShop&Co** by implementing a reliable and user-friendly CRM solution.

1.2 Purpose

The purpose of developing the CRM application for TheChaiShop&Co is to improve the management of customer relationships and streamline business operations. As the customer base grows, maintaining records manually becomes difficult and inefficient. This system is designed to provide a centralized platform where all customer-related information can be stored, accessed, and managed easily.

The CRM application aims to help the business maintain accurate customer details, track purchase history, manage orders, and record customer preferences. By organizing this information in one system, the staff can quickly access data and provide better customer service. It also helps in reducing errors, saving time, and improving overall operational efficiency.

Another important purpose of the system is to strengthen customer engagement and loyalty. The application allows the business to monitor customer feedback, offer personalized promotions, and manage loyalty programs effectively. This helps in building stronger relationships with customers and encourages repeat purchases.

Additionally, the CRM system supports management in analyzing sales performance and customer trends. These insights help in making informed business decisions and planning future strategies for growth.

Overall, the purpose of this project is to enhance customer satisfaction, improve internal management processes, and support the long-term success of TheChaiShop&Co through an efficient and reliable CRM solution.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

Small and medium-sized businesses like **TheChaiShop&Co** often face difficulties in managing customer information, tracking orders, and maintaining customer relationships efficiently. Currently, many customer details, purchase records, and feedback may be handled manually or through separate systems, which can lead to data loss, duplication, and errors. This makes it challenging for the business to provide personalized services and respond quickly to customer needs.

Customers expect faster service, personalized offers, and better communication from businesses. However, without a proper system to track customer interactions and preferences, it becomes difficult for the business to meet these expectations. As the number of customers increases, managing customer data manually also consumes more time and effort for employees.

Therefore, there is a need for a centralized CRM application that can store customer information, track purchase history, manage orders, and record feedback in one platform. Such a system will help **TheChaiShop&Co** improve customer service, enhance customer engagement, and support better decision-making for business growth.

The problem this project addresses is the lack of an organized and efficient system to manage customer relationships, which affects service quality, operational efficiency, and long-term customer retention.

2.2 Empathy Map Canvas

The **Empathy Map Canvas** helps understand the needs, feelings, and behaviors of customers who interact with **TheChaiShop&Co**. It focuses on customer experiences to design a better CRM system that improves service and satisfaction.

1. Says

- Customers say they want quick service and accurate orders.
- They expect friendly communication and good customer support.
- They ask for offers, discounts, and loyalty rewards.

2. Thinks

- Customers think about getting good quality tea and snacks.
- They expect the shop to remember their preferences.
- They want a smooth and convenient ordering experience.

3. Does

- Customers visit the shop frequently or place repeat orders.
- They provide feedback about taste, service, or pricing.
- They may recommend the shop to friends if satisfied.

4. Feels

- Customers feel happy when they receive fast and friendly service.
- They feel valued when the business remembers their preferences.
- They may feel frustrated if orders are delayed or incorrect.

5. Pains

- Long waiting times for orders.
- Lack of personalized offers or rewards.
- Difficulty in giving feedback or receiving responses.

6. Gains

- Faster service and accurate order management.
- Personalized offers and loyalty benefits.
- Better communication and improved customer experience.

2.3 Brainstorming

Brainstorming is an important step in the ideation phase where different ideas and solutions are generated to solve the identified problem. For **TheChaiShop&Co CRM application**, brainstorming helps identify features and functionalities that can improve customer relationship management and business efficiency.

During the brainstorming process, the development team focuses on understanding customer needs, business requirements, and possible technological solutions. Several ideas are discussed to determine how the CRM system can simplify operations and improve customer engagement.

- **Customer Data Management:** Creating a centralized database to store customer details such as name, contact information, and purchase history.
- **Order Tracking System:** Allowing staff to record and manage customer orders efficiently.
- **Customer Feedback Management:** Providing a system to collect and track customer feedback for service improvement.
- **Loyalty and Rewards Program:** Offering points, discounts, or special offers to regular customers.
- **Sales Monitoring:** Tracking daily and monthly sales to analyze business performance.
- **Personalized Promotions:** Sending targeted offers to customers based on their preferences and purchase history.

3.REQUIREMENT ANALYSIS PHASE

The Requirement Analysis Phase is an important stage in the development of the CRM application for TheChaiShop&Co. In this phase, the needs and expectations of the business and its customers are carefully studied and documented. The main goal is to understand what features and functions the system should include in order to solve the identified problems and improve business operations.

During this phase, information is collected from stakeholders such as business owners, staff members, and customers. Their requirements help determine how the CRM system should work and what functionalities it should provide. The analysis ensures that the system will meet the practical needs of the business and improve customer relationship management.

Key requirements identified for the CRM application include managing customer details, tracking purchase history, managing orders, and recording customer feedback. The system should also support features like loyalty programs, sales tracking, and generating reports to help management make better business decisions.

In addition, the system must be user-friendly, secure, and reliable so that staff members can easily use it in their daily operations. By clearly defining these requirements, the development team can design and build a CRM application that effectively supports the goals and growth of TheChaiShop&Co.

3.1 Customer Journey Map

Customer Journey Map describes the steps a customer goes through while interacting with **TheChaiShop&Co**, from the first contact to becoming a loyal customer. Understanding this journey A helps design a CRM system that improves customer experience and satisfaction.

1.Awareness

At this stage, customers become aware of TheChaiShop&Co through advertisements, social media, recommendations from friends, or by passing by the shop.

2.Consideration

Customers start exploring the shop’s menu, prices, and reviews. They decide whether to visit the shop or try its products based on quality, variety, and customer feedback.

3.Purchase

Customers visit the shop or place an order. The staff records the order and serves tea or snacks. A CRM system can help track orders and store customer details during this stage.

4.Experience

Customers evaluate their experience based on product quality, service speed, staff behavior, and overall environment. Positive experiences increase the chances of repeat visits.

5.Feedback

Customers may give feedback directly to the staff or through digital platforms. The CRM system records this feedback to help improve services.

6.Loyalty

Satisfied customers return to the shop regularly and may participate in loyalty programs or receive special offers. They may also recommend TheChaiShop&Co to others.

Mapping this journey helps the business understand customer interactions and improve service at every stage.

3.2 Solution Requirements

The **Solution Requirements** describe the features and functions that the CRM application must provide to meet the needs of **TheChaiShop&Co**. These requirements ensure that the system effectively manages customer relationships and supports daily business operations.

1.CustomerManagement

The system should allow staff to store and manage customer information such as name, contact number, email address, and preferences. This helps maintain a proper record of all customers.

2. Order Management

The CRM application should enable staff to record and track customer orders efficiently. It should maintain details of products purchased, order dates, and order status.

3. Purchase History Tracking

The system should keep a record of each customer's purchase history. This information can help the business understand customer preferences and buying patterns.

4. Feedback Management

The application should provide a feature for recording and managing customer feedback. This helps the business improve product quality and service.

5. Loyalty and Rewards Program

The system should support loyalty programs by tracking customer visits or purchases and offering rewards, discounts, or points to regular customers.

6. Sales Monitoring and Reports

The CRM system should generate reports on sales performance, customer activity, and popular products to help management make better decisions.

Overall, these solution requirements ensure that the CRM system improves efficiency, enhances customer satisfaction, and supports the growth of **TheChaiShop&Co**.

3.1 Customer Journey Map

A **Customer Journey Map** describes the steps a customer goes through while interacting with **TheChaiShop&Co**, from the first contact to becoming a loyal customer. Understanding this journey helps design a CRM system that improves customer experience and satisfaction.

1.Awareness

At this stage, customers become aware of TheChaiShop&Co through advertisements, social media, recommendations from friends, or by passing by the shop.

2.Consideration

Customers start exploring the shop's menu, prices, and reviews. They decide whether to visit the shop or try its products based on quality, variety, and customer feedback.

3.Purchase

Customers visit the shop or place an order. The staff records the order and serves tea or snacks. A CRM system can help track orders and store customer details during this stage.

4.Experience

Customers evaluate their experience based on product quality, service speed, staff behavior, and overall environment. Positive experiences increase the chances of repeat visits.

5.Feedback

Customers may give feedback directly to the staff or through digital platforms. The CRM system records this feedback to help improve services.

6.Loyalty

Satisfied customers return to the shop regularly and may participate in loyalty programs or receive special offers. They may also recommend TheChaiShop&Co to others.

Mapping this journey helps the business understand customer interactions and improve service at every stage.

3.2 Solution Requirements

The **Solution Requirements** describe the features and functions that the CRM application must provide to meet the needs of **TheChaiShop&Co**. These requirements ensure that the system effectively manages customer relationships and supports daily business operations.

1.CustomerManagement

The system should allow staff to store and manage customer information such as name, contact number, email address, and preferences. This helps maintain a proper record of all customers.

2.OrderManagement

The CRM application should enable staff to record and track customer orders efficiently. It should maintain details of products purchased, order dates, and order status.

3.PurchaseHistoryTracking

The system should keep a record of each customer's purchase history. This information can help the business understand customer preferences and buying patterns.

4. Feedback Management

The application should provide a feature for recording and managing customer feedback. This helps the business improve product quality and service.

5.Loyalty and Rewards Program

The system should support loyalty programs by tracking customer visits or purchases and offering rewards, discounts, or points to regular customers.

6. Sales Monitoring and Reports

The CRM system should generate reports on sales performance, customer activity, and popular products to help management make better decisions.

3.3 Data Flow Diagram (DFD)

A **Data Flow Diagram (DFD)** visually represents how data moves through the CRM system for **TheChaiShop&Co**, showing the interactions between users, processes, and data storage. Here's a simplified explanation of the DFD for the CRM application:

1. External Entities:

- **Customer:** Places orders, provides feedback, and receives promotions or loyalty benefits.
- **Staff/Management:** Manages customer records, processes orders, and generates reports.

2. Processes:

- **Customer Management:** Collects and updates customer information.
- **Order Management:** Records and tracks customer orders.
- **Feedback Management:** Receives, stores, and analyzes customer feedback.
- **Loyalty Program Management:** Tracks customer rewards and loyalty points.
- **Report Generation:** Generates sales and customer activity reports for management.

3. Data Stores:

- **Customer Database:** Stores personal details, preferences, and purchase history.
- **Order Database:** Stores order details, product information, and order status.
- **Feedback Database:** Stores customer feedback and reviews.
- **Loyalty Database:** Stores loyalty points, reward history, and offer eligibility.

4. Data Flow:

- Customers provide data (orders, feedback) → CRM processes it → Data stored in respective databases → Staff accesses data for analysis, reports, or customer interaction → Customers receive personalized offers or responses.

3.4 Technology Stack

The **Technology Stack** defines the tools, frameworks, and platforms used to develop the CRM application for **TheChaiShop&Co**. Choosing the right technologies ensures the system is reliable, scalable, and user-friendly.

4. PROJECT DESIGN PHASE

The **Project Design Phase** focuses on planning and structuring the CRM application for **TheChaiShop&Co** before actual development begins. This phase ensures that the system meets the requirements identified in the previous phases and provides a clear roadmap for developers, designers, and stakeholders.

Key objectives of this phase include:

1. System Architecture Design

- Defines the overall structure of the CRM system.
- Shows how different modules like Customer Management, Order Management, Feedback Management, and Loyalty Programs interact.
- Ensures scalability, reliability, and security of the system.

2. Database Design

- Creates an organized structure for storing customer, order, feedback, and loyalty data.
- Defines tables, fields, relationships, and constraints to maintain data integrity.
- Supports efficient data retrieval for reports and analytics.

3. User Interface (UI) Design

- Designs intuitive and user-friendly interfaces for staff and management.
- Focuses on responsiveness, ease of navigation, and accessibility.
- Includes dashboards, order forms, feedback forms, and reports.

4. Module & Workflow Design

- Specifies the workflow for each system module.
- Ensures smooth data flow between modules.

5. Security & Access Design

- Defines user roles (e.g., admin, staff) and permissions.
- Implements data protection measures to secure customer information.

4.1 Problem–Solution Fit

The **Problem–Solution Fit** stage evaluates how well the CRM application addresses the challenges faced by **TheChaiShop&Co** and ensures that the proposed solution effectively meets business and customer needs.

Problem 1: Manual Customer Management

- **Issue:** Customer details, preferences, and order history are recorded manually, leading to errors and inefficiencies.
- **Solution:** The CRM system centralizes customer information in a digital database, enabling quick access, updates, and accurate tracking.

Problem 2: Inefficient Order Tracking

- **Issue:** Tracking orders manually makes it difficult to ensure timely service and accurate delivery.
- **Solution:** The CRM application automates order management, providing real-time updates on order status and reducing mistakes.

Problem 3: Poor Customer Engagement

- **Issue:** Lack of personalized communication and loyalty programs reduces customer
- **Solution:** The CRM system stores customer preferences, purchase history, and feedback, allowing targeted promotions, personalized offers, and loyalty rewards.

Problem 4: Limited Insights for Business Decisions

- **Issue:** Without proper data analytics, management cannot track sales trends or customer behavior effectively.
- **Solution:** The CRM application generates reports and dashboards on sales performance, popular products, and customer activity, supporting informed decision-making.

4.2 Proposed Solution

The proposed solution for **TheChaiShop&Co** is a comprehensive **Customer Relationship Management (CRM) application** designed to streamline operations, enhance customer engagement, and improve business decision-making.

Key Features of the Proposed Solution:

1. **Centralized Customer Management**
   - Stores customer details such as name, contact information, preferences, and purchase history.
   - Allows staff to quickly access and update customer data, ensuring accuracy and efficiency.
2. **Order Management System**
   - Tracks customer orders in real-time from placement to delivery.
   - Reduces errors and ensures faster service, enhancing the overall customer experience.
3. **Feedback and Review Management**
   - Records and manages customer feedback systematically.
   - Provides insights to improve product quality and service standards.
4. **Loyalty and Rewards Program**
   - Tracks customer visits and purchases to offer loyalty points, discounts, or personalized offers.
   - Encourages repeat purchases and strengthens customer retention.
5. **Sales Monitoring and Reporting**
   - Generates reports and dashboards showing sales trends, popular products, and customer activity.
   - Supports informed decision-making and business growth strategies.
6. **User-Friendly Interface**
   - Provides intuitive dashboards for staff and management.
   - Ensures smooth navigation and minimal learning curve.

5.PROJECT PLANNING & SCHEDULING

Project Planning & Scheduling is a critical phase in any project management process, including software development projects such as the CRM application for **TheChaiShop&Co**. It involves systematically organizing, coordinating, and allocating resources, tasks, and timelines to ensure that a project is completed successfully, on time, and within budget. This phase acts as a roadmap that guides the development team, stakeholders, and management through every stage of the project, reducing uncertainties and minimizing risks.

Project Planning focuses on defining the scope, objectives, and deliverables of the project. It identifies all the tasks and activities required to complete the project, along with dependencies, milestones, and priorities. During planning, resources such as developers, designers, testers, hardware, and software tools are allocated effectively to maximize productivity and ensure smooth execution. It also involves identifying potential risks and creating contingency plans to mitigate them. By clarifying responsibilities and defining clear goals, project planning ensures that every team member understands their role and contribution.

Project Scheduling is closely related and involves setting a timeline for completing each task and phase. It ensures that work is organized in a logical sequence, with milestones to monitor progress. Tools like Gantt charts, Kanban boards, or project management software are often used to visualize schedules and dependencies. Scheduling allows the project manager to track progress, adjust timelines if needed, and ensure that deadlines are met. It also helps in balancing workload among team members and identifying critical paths that could affect overall project completion.

Together, **Project Planning & Scheduling** provide structure, predictability, and efficiency to the project. For **TheChaiShop&Co CRM application**, it ensures that modules such as Customer Management, Order Processing, Feedback Handling, and Loyalty Programs are developed systematically. This phase not only reduces errors and delays but also ensures that the final product meets business requirements, enhances operational efficiency, and improves customer satisfaction.

By integrating planning and scheduling effectively, projects achieve better coordination, resource utilization, and successful delivery, ultimately contributing to long-term organizational growth.

5.1 Project Planning

Project Planning is the process of defining the objectives, scope, tasks, resources, and timelines required to successfully complete a project. It serves as a roadmap that guides the development team, stakeholders, and management in achieving project goals efficiently. For the CRM application of **TheChaiShop&Co**, project planning ensures that all modules—from Customer Management to Order Tracking, Feedback Handling, and Loyalty Programs—are delivered systematically, on time, and within scope.

Objectives of Project Planning:

- Clearly define the project's goals, deliverables, and expected outcomes.
- Break down the project into smaller, manageable tasks and modules.
- Allocate resources such as developers, designers, testers, and tools effectively.
- Establish timelines, milestones, and deadlines for each task.
- Identify potential risks and develop mitigation strategies.
- Ensure smooth communication and coordination among team members.

Key Activities in Project Planning:

1. **Requirement Analysis:** Finalizing functional and non-functional requirements with stakeholders.
2. **System Design:** Creating architecture diagrams, database schemas, and UI mockups.
3. **Technology Setup:** Configuring development frameworks, cloud services, and tools.
4. **Development:** Implementing individual modules according to specifications.
5. **Testing:** Conducting unit, integration, and user acceptance testing (UAT).
6. **Deployment:** Launching the application on a server or cloud platform.
7. **Training & Support:** Educating staff on system usage and providing ongoing technical support.

Resource Allocation:

- **Team Members:** Front-end & back-end developers, UI/UX designers, QA testers, project manager.

- **Tools:** Programming frameworks, databases, version control, testing software, and cloud hosting.

Risk Management:

- Scheduling delays → use milestone tracking and buffer periods.
- Technical challenges → provide training and skilled personnel.
- Data security concerns → implement encryption, authentication, and role-based access.

Project Tracker, Velocity & Burndown Chart

To ensure the CRM application project for **TheChaiShop&Co** stays on schedule and meets its goals, project management tools like **Project Tracker, Velocity, and Burndown Charts** are used. These tools help monitor progress, measure efficiency, and identify potential bottlenecks during development.

1. Project Tracker

A **Project Tracker** is a tool that records all tasks, milestones, deadlines, and responsibilities within the project. It allows the project manager and team members to:

- Track ongoing tasks and completed tasks.
- Monitor deadlines and milestones.
- Assign responsibilities to team members.
- Identify delays or pending tasks early.

Popular tools include **Jira, Trello, or Asana**, which offer dashboards to visualize the project status in real-time.

2. Velocity

Velocity measures the amount of work a development team completes during a sprint or iteration, usually in terms of story points or task units. It helps the project team understand:

- How quickly tasks are being completed.
- Whether the team is maintaining consistent progress.
- Adjustments needed for future sprints to meet project deadlines.

3. Burndown Chart

A **Burndown Chart** is a graphical representation showing the remaining work versus time in a project or sprint. It helps track progress visually by displaying:

- Total tasks or story points remaining.
- Actual progress compared to planned progress.
- Forecast for project completion based on current pace.

In a CRM development project, the burndown chart highlights if the team is on track to finish modules like Customer Management, Order Tracking, Feedback Management, and Reporting on time.

Benefits of Using These Tools:

- Improves transparency and accountability.
- Helps identify delays or bottlenecks early.
- Facilitates data-driven planning and resource allocation.
- Ensures timely delivery of the CRM system for **TheChaiShop&Co**.

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	UserStory Task	Story Points	Priority	Team Member
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account so that I can configure and	1	High	Thiruselvi.N

			deploy the TheChaiShop&Co CRM application.			
Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored and managed systematically.	3	High	Mahalakshmi.R
Sprint-2	Data Modeling	USN-3	As a user, I want separate tabs for each object so that I can easily navigate and manage CRM records within the application.	3	High	Nisha.N

6. PROJECT DEVELOPMENT PHASE

The **Project Development Phase** is the stage where the CRM application for **The Chai Shop &Co** is actually built based on the planning and design completed in earlier phases. This phase involves coding, integrating, and testing all system modules to ensure that the application meets the functional and non-functional requirements.

Key Objectives of the Development Phase:

1. Transform designs and specifications into a working software application.
2. Implement all core modules including Customer Management, Order Tracking, Feedback Handling, Loyalty Programs, and Reporting.
3. Ensure the system is user-friendly, secure, and efficient.
4. Test the system iteratively to detect and fix errors early.

Steps in the Project Development Phase:

1. Module-Wise Development

- **Customer Management Module:** Coding features for storing, updating, and retrieving customer information.
- **Order Management Module:** Implementing order tracking, status updates, and purchase history.
- **Feedback Module:** Developing forms and databases to collect, store, and analyze customer feedback.
- **Loyalty Program Module:** Tracking points, rewards, and special offers for repeat customers.
- **Reporting Module:** Generating sales reports, dashboards, and analytics for management decision-making.

2. Integration of Modules

- Combining individual modules so they work seamlessly together.
- Ensuring that data flows correctly between Customer Management, Orders, Feedback, and Loyalty Programs.

3. Testing During Development

- **Unit Testing:** Verifying each module works as intended.
- **Integration Testing:** Ensuring modules interact properly.
- **System Testing:** Checking overall functionality, performance, and security.

4. Iterative Improvement

- Making adjustments and improvements based on testing results.
- Incorporating feedback from stakeholders and potential users.

1. Requirement Analysis

- Collect functional and non-functional requirements from stakeholders.
- Understand customer needs, business processes, and pain points.
- Document requirements to guide the design and development process.

2. Ideation & Design

- Brainstorm ideas and solutions for the CRM system.
- Create wireframes, UI mockups, and workflow diagrams.
- Design system architecture and database structure.
- Define modules: Customer Management, Order Tracking, Feedback, Loyalty Programs, Reporting.

3. Project Planning & Scheduling

- Break the project into tasks and assign responsibilities.
- Set milestones, deadlines, and resource allocation.
- Prepare risk management and mitigation strategies.
- Use project tracking tools, velocity metrics, and burndown charts to monitor progress.

4. Development Phase

- Implement individual modules as per the design.
- Perform unit testing for each module to ensure correctness.
- Integrate modules and ensure seamless data flow.
- Conduct system testing for performance, security, and reliability.

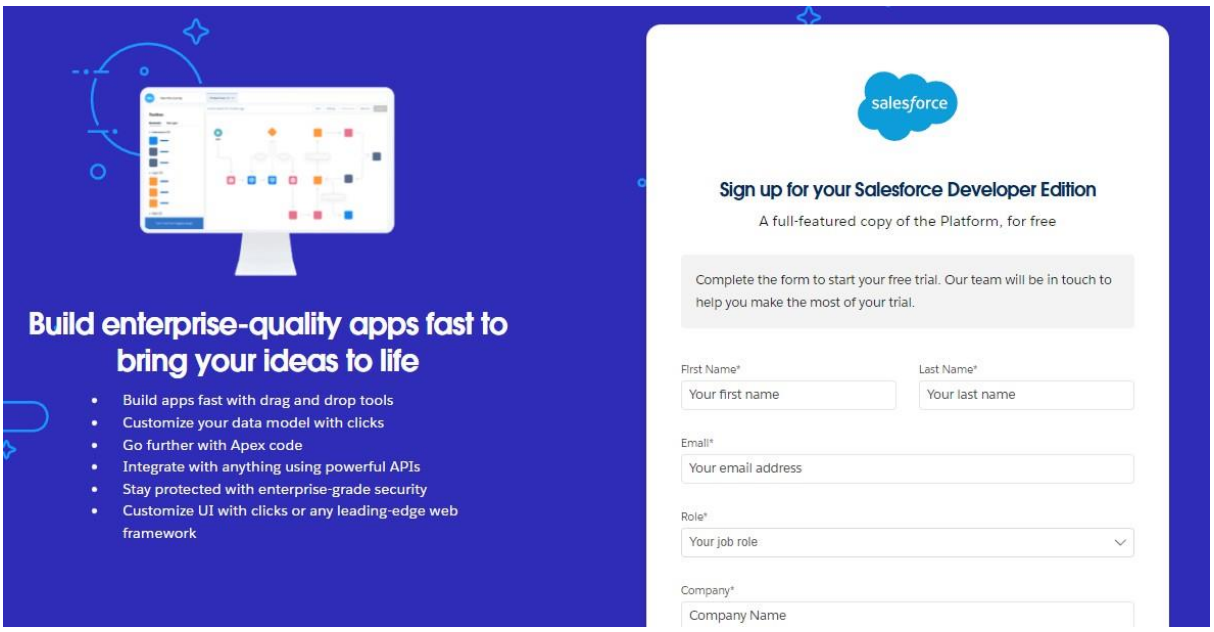
5. Deployment

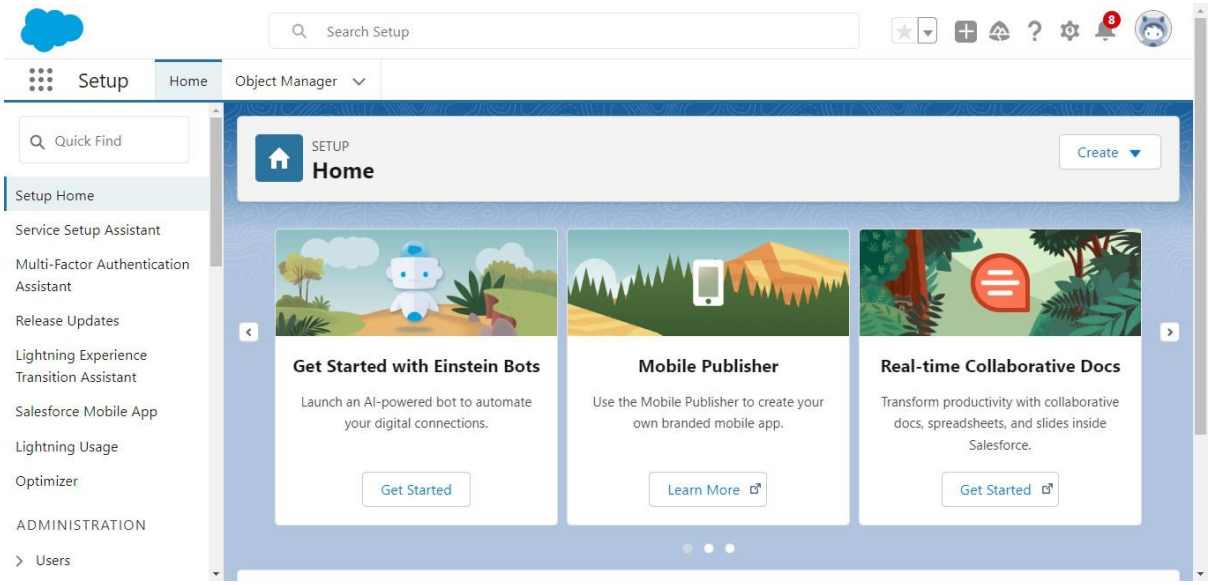
- Deploy the CRM system on a cloud platform or local server.
- Configure settings for live usage by staff and management.

Implementation

Milestone 1 - Salesforce developer account creation

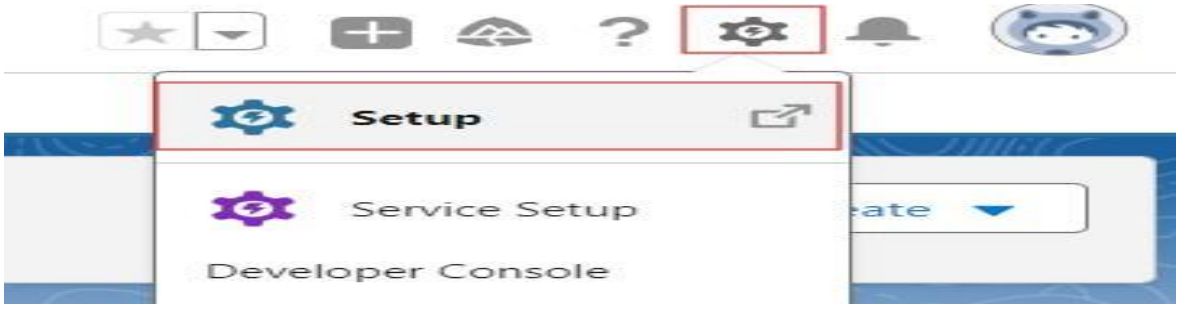
Creating Developer Account





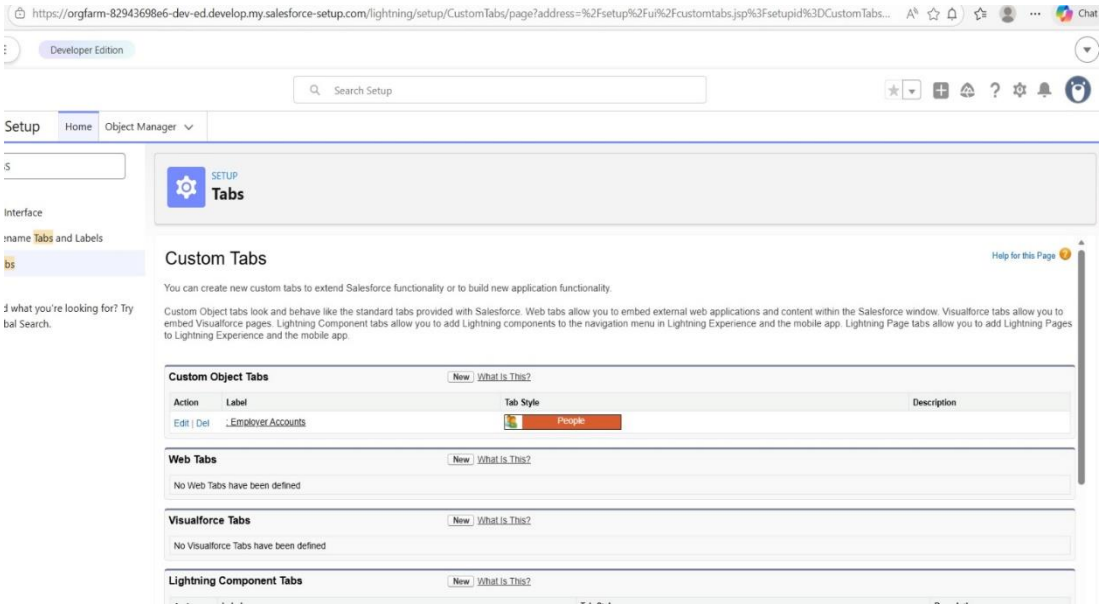
Milestone 2 – Objects

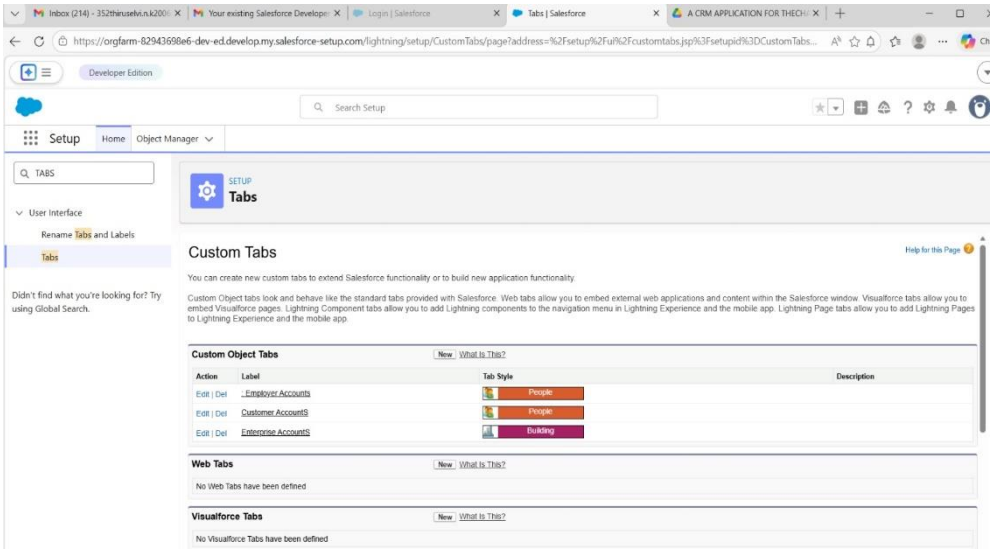
Setup



Milestone 3 – Tabs

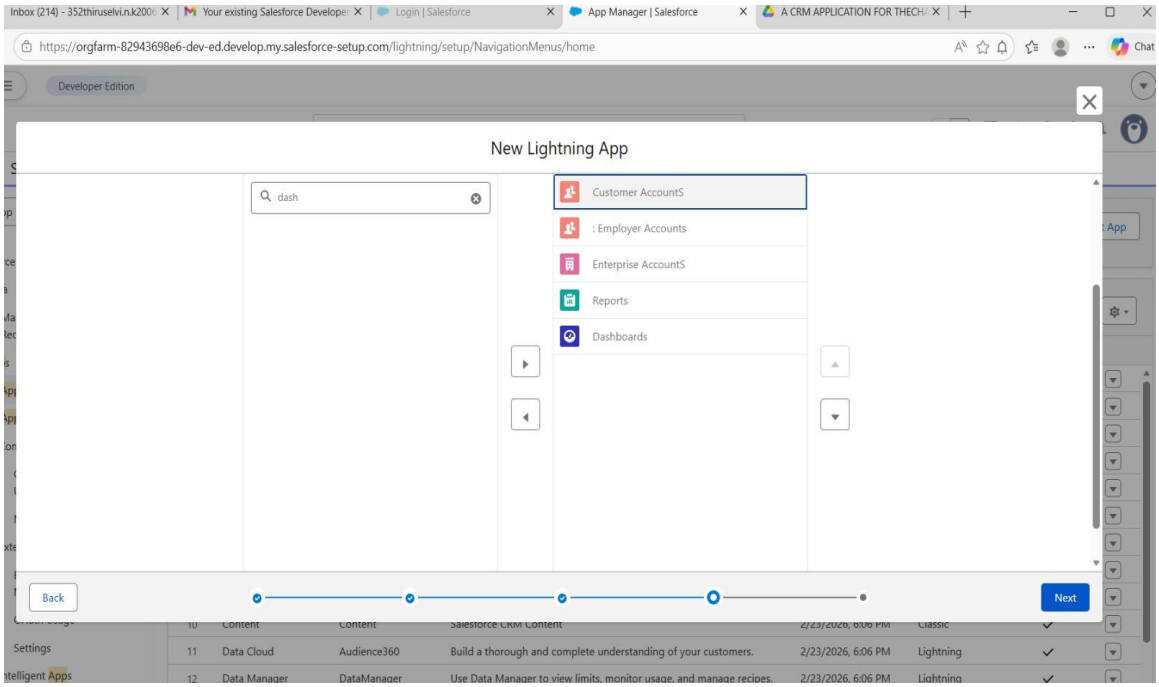
Custom tabs creation





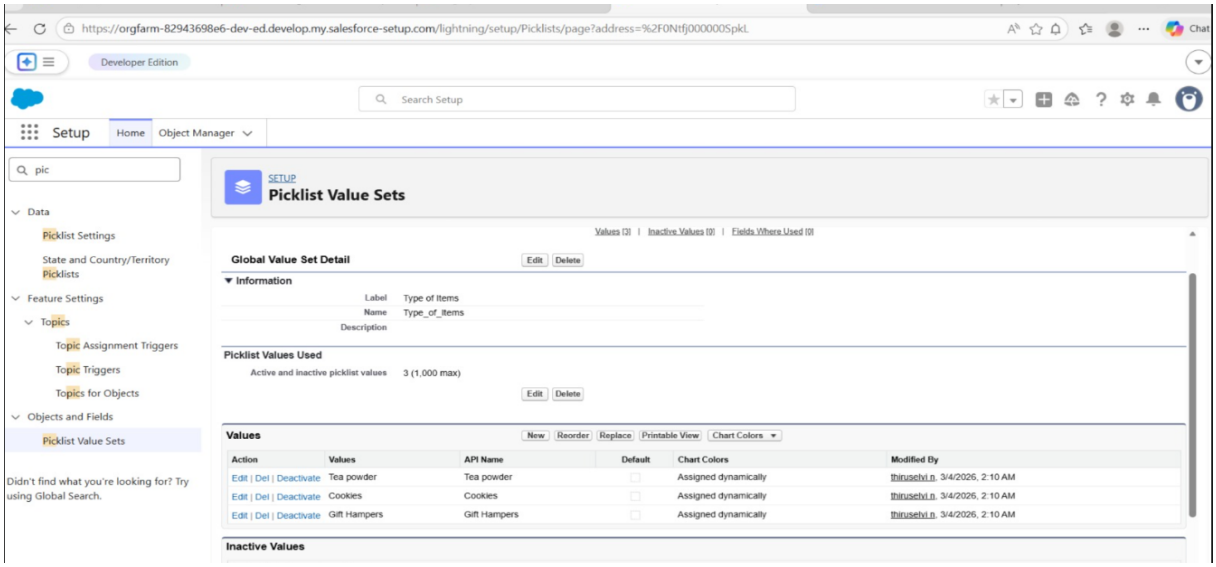
Milestone 4 - The Lightning App

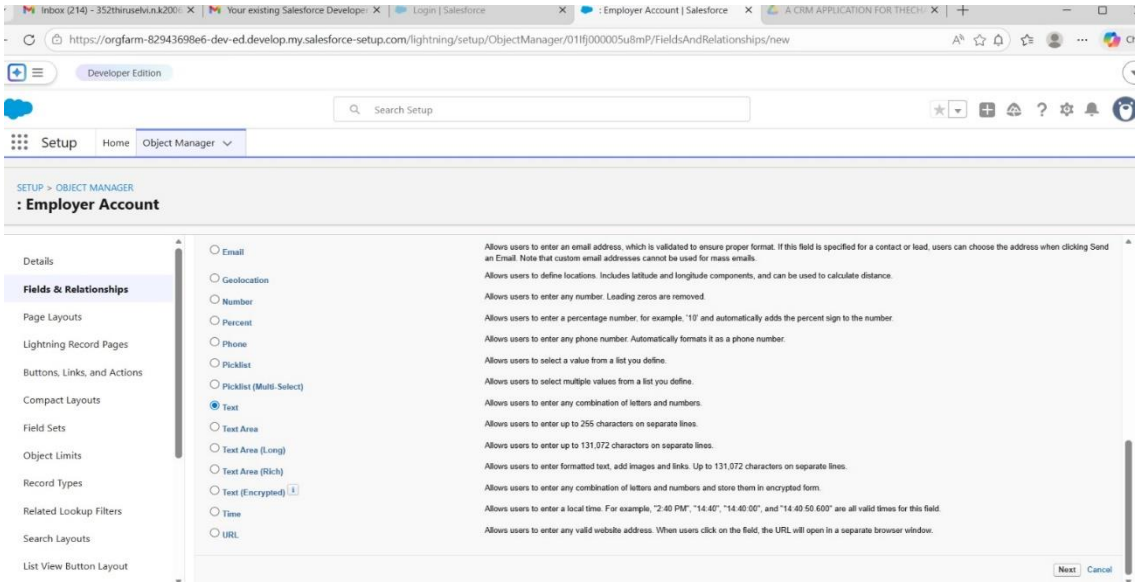
Create a lightning app



Milestone 5 : Global Picklist

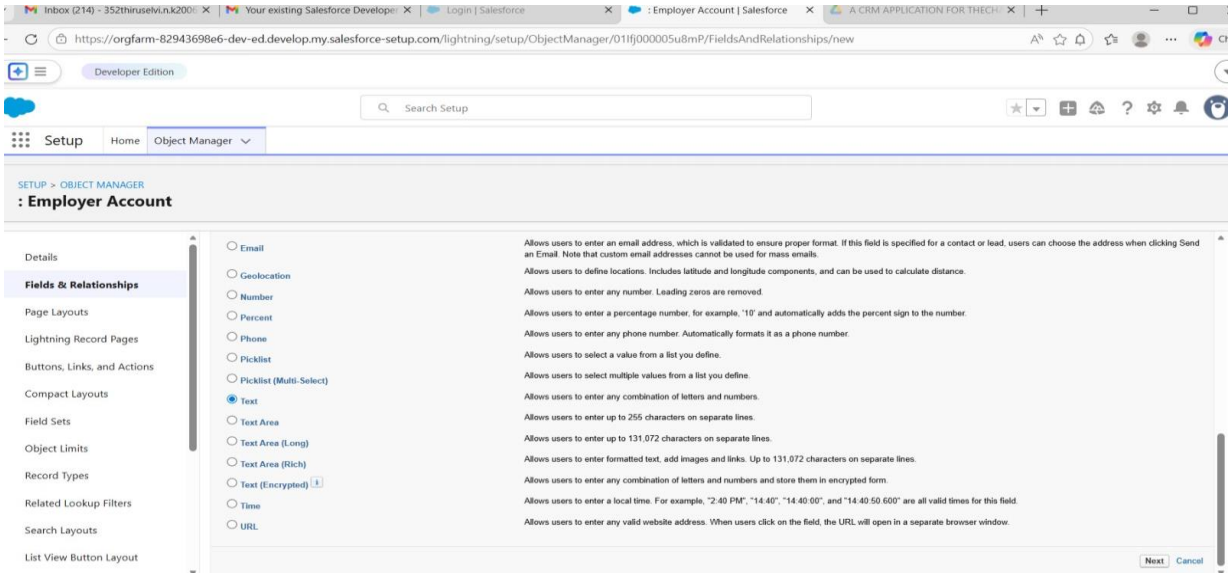
Create Global Picklit

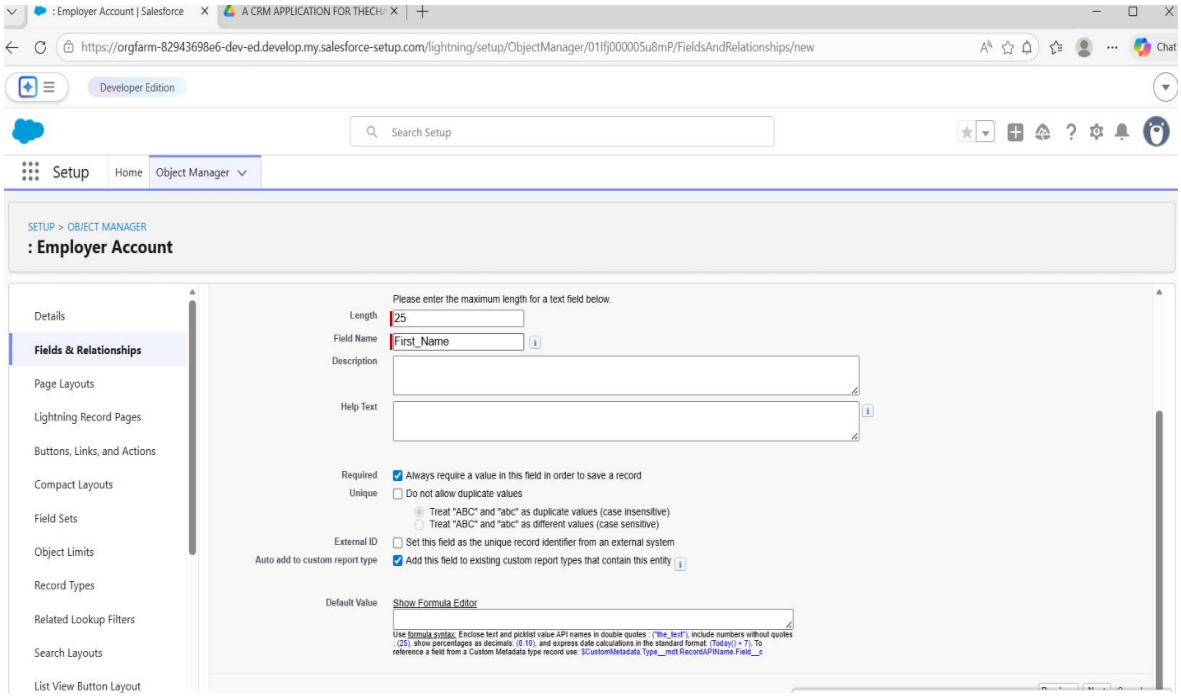




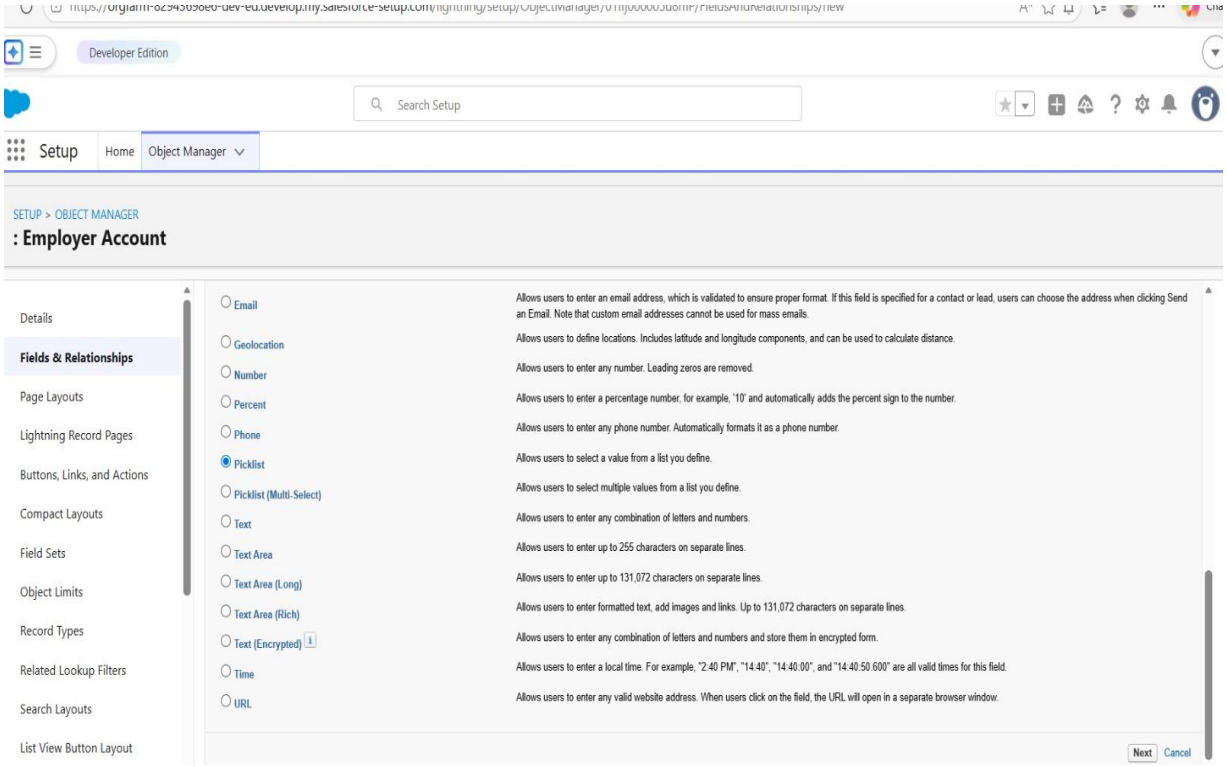
Milestone 6 : Fields & Relationships

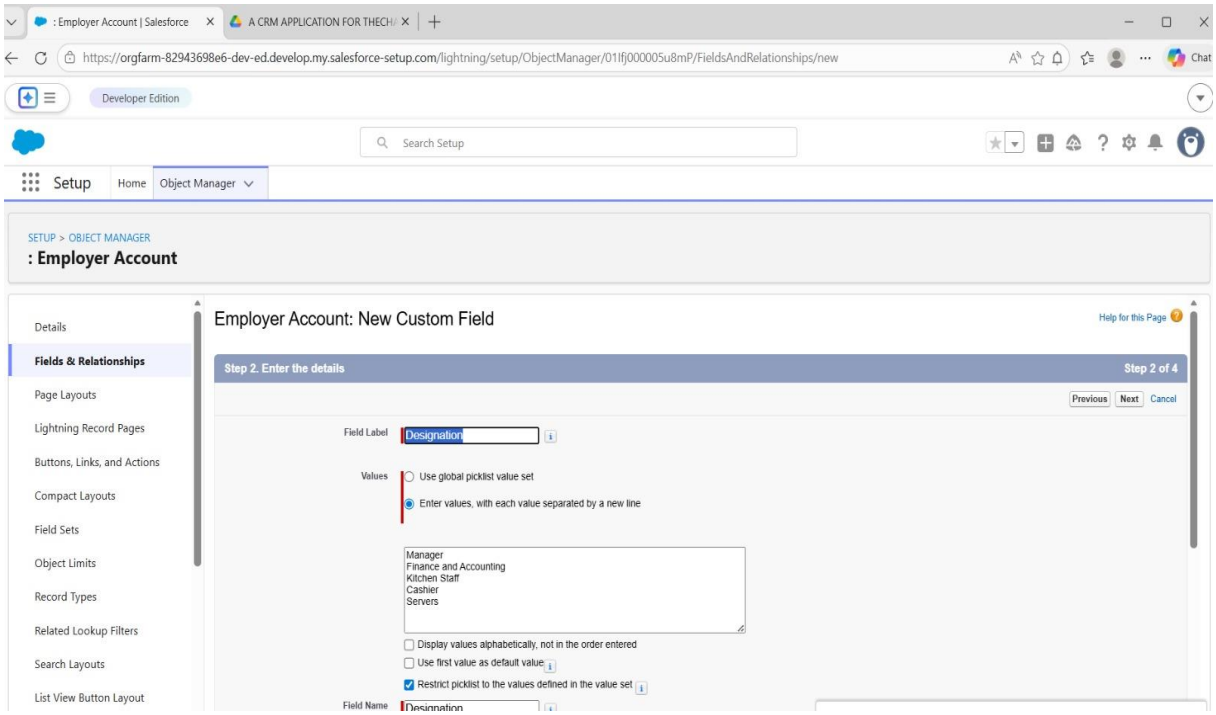
Create Custom fields for Employer Account



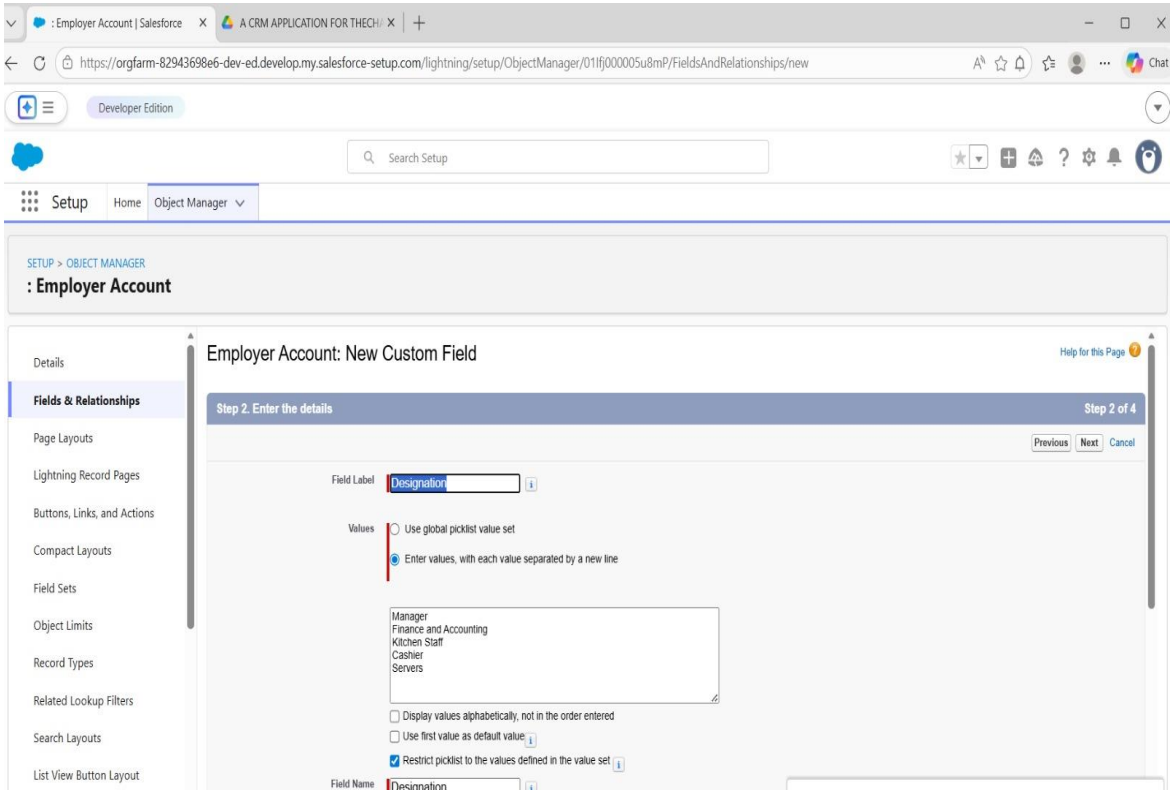


Create Custom fields for Employer Account Using Picklist

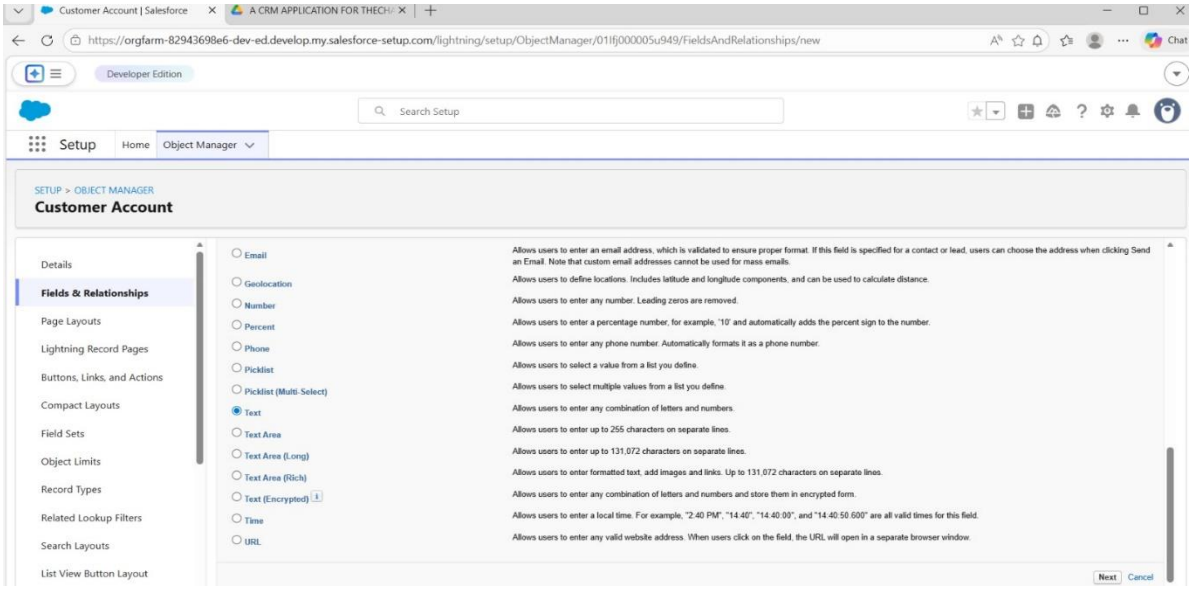


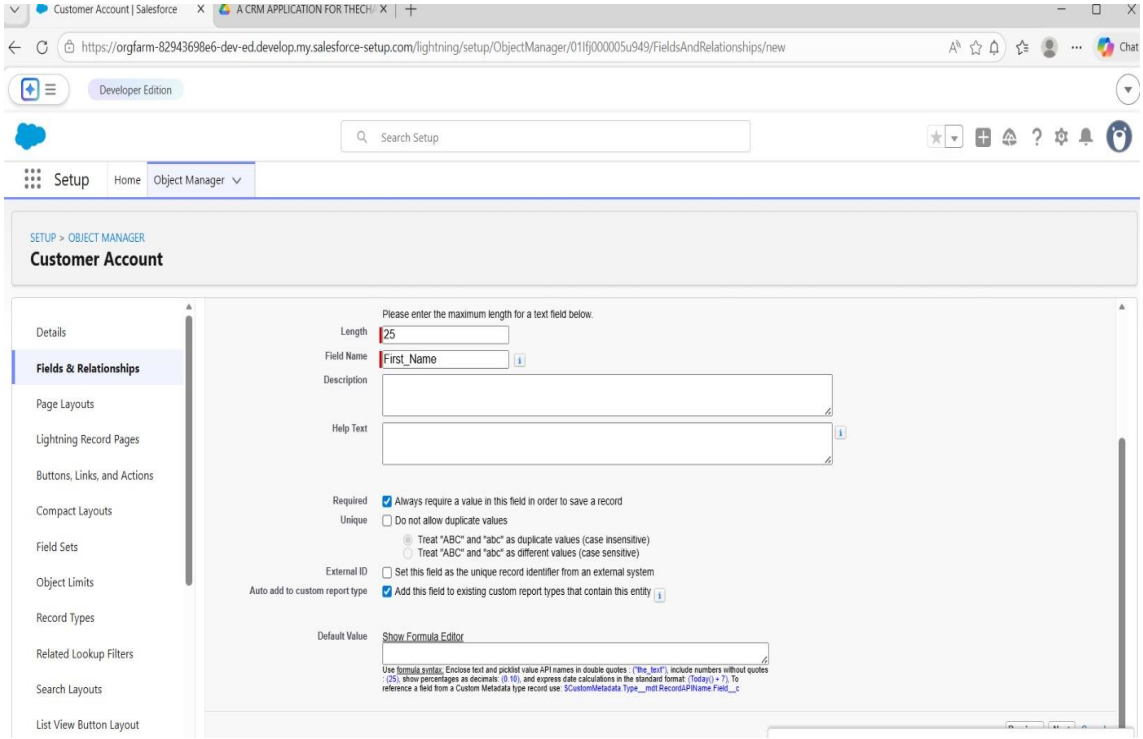


Employer Account: Custom Account

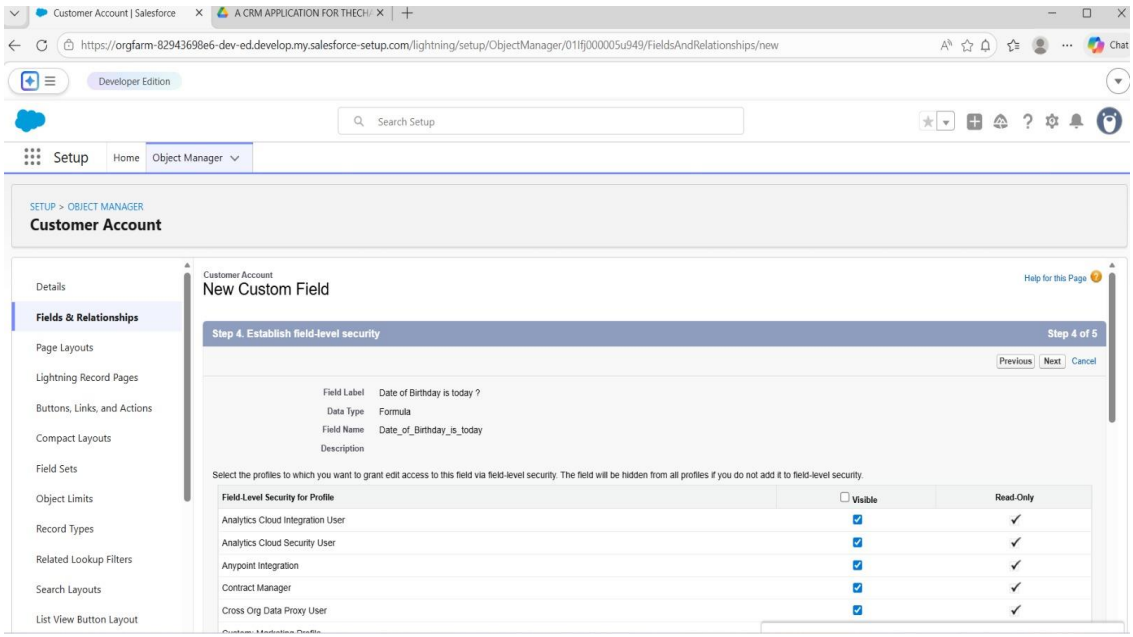


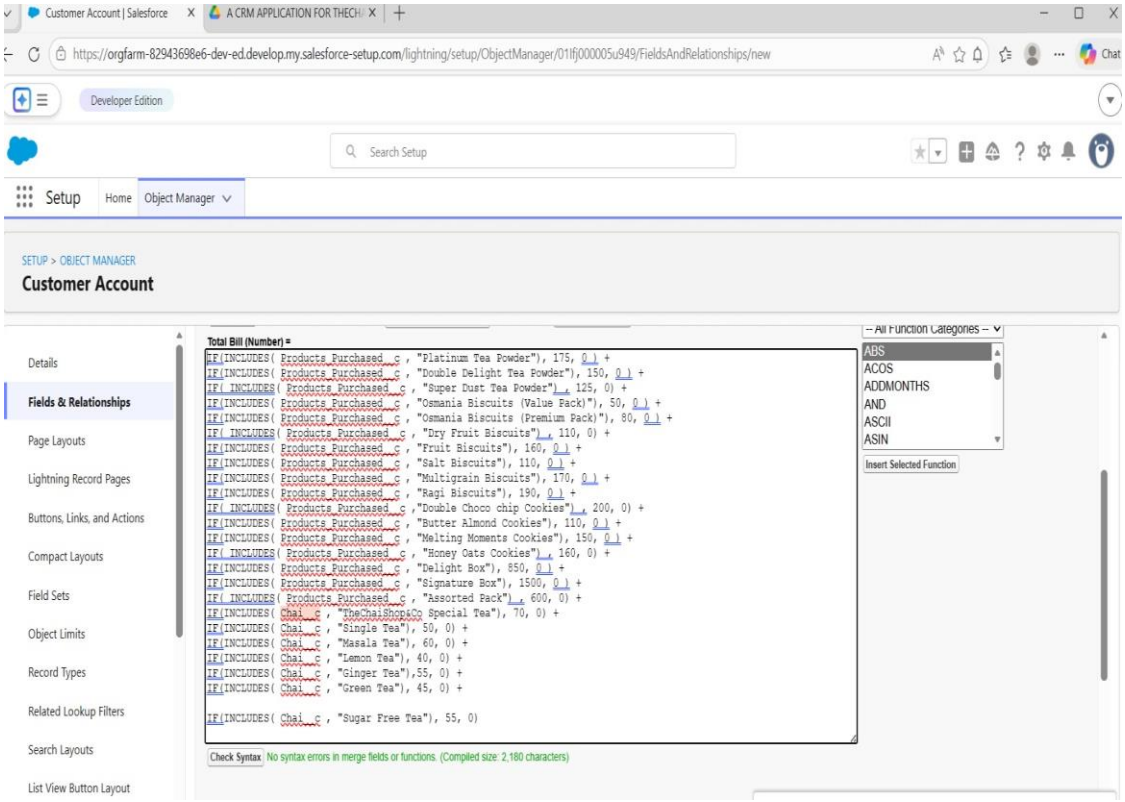
Create Custom fields for Customer Account



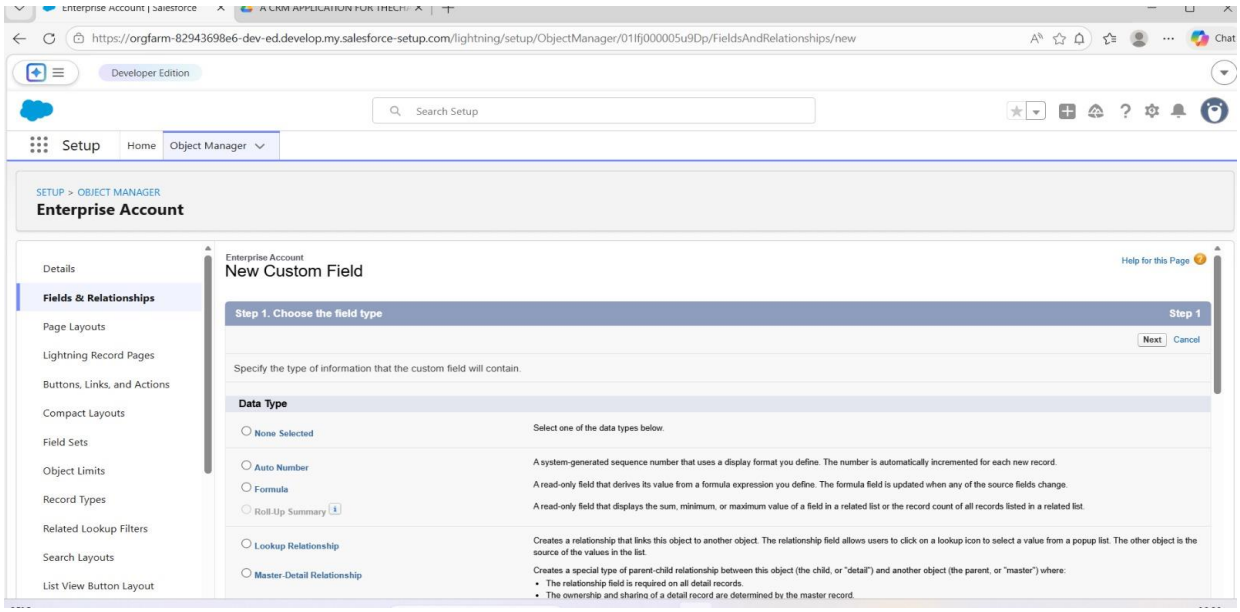


Customer Account: Formula





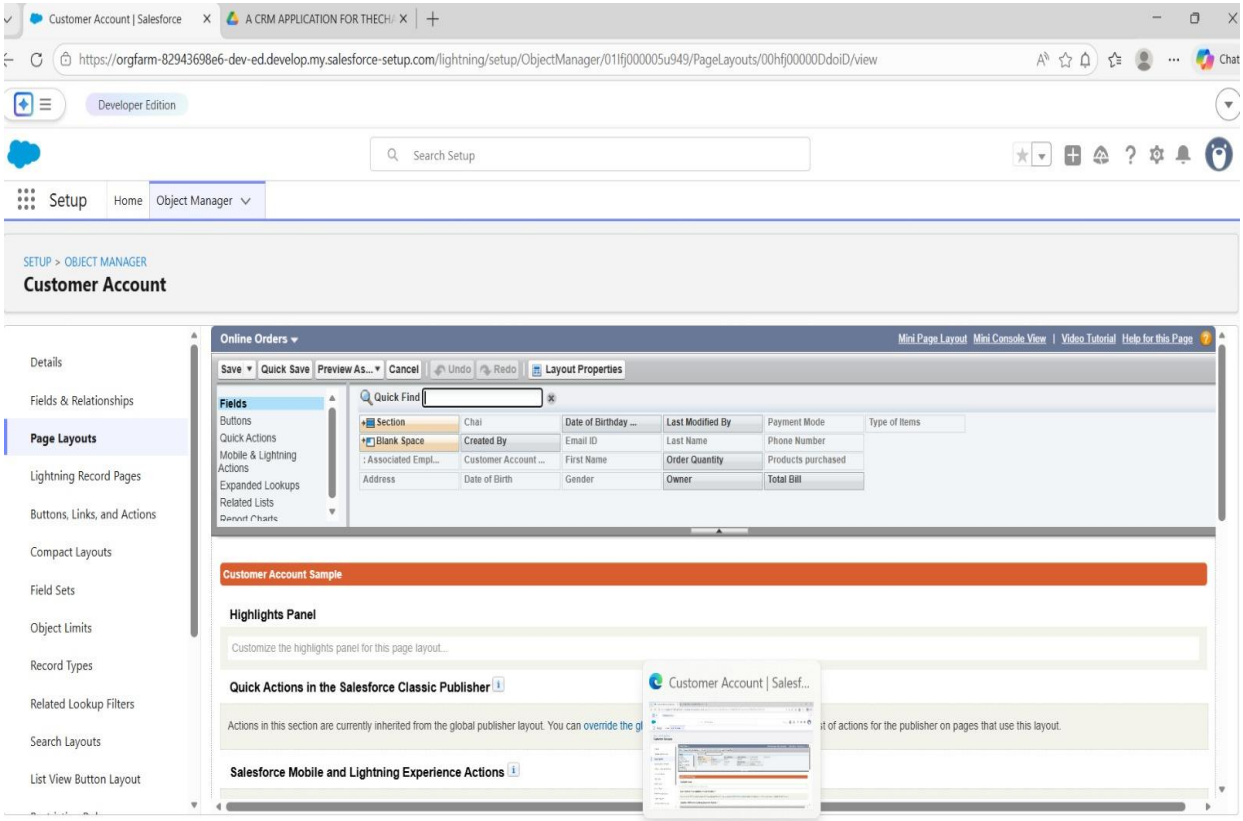
Enterprise Account



Milestone 7 : Page Layouts

- For the personalized field view in Customer Accounts, let's
- create two page layouts Online orders and Walk-In orders.

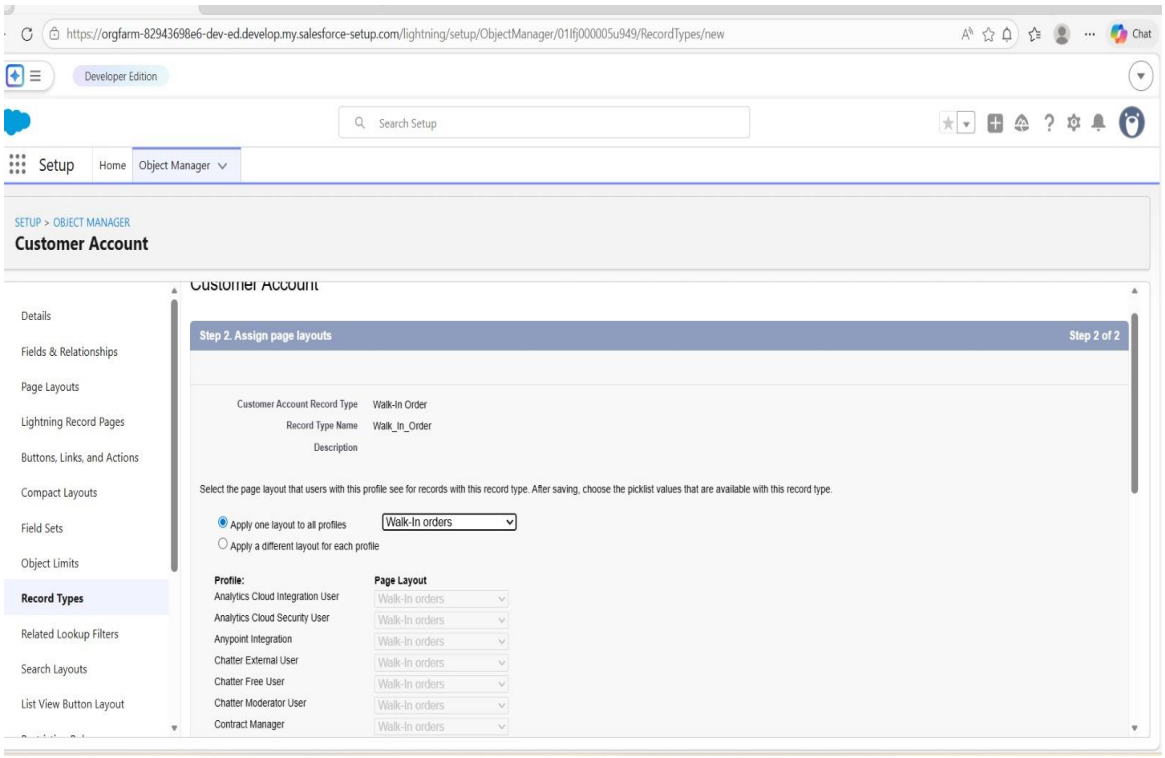
Online Orders page layout

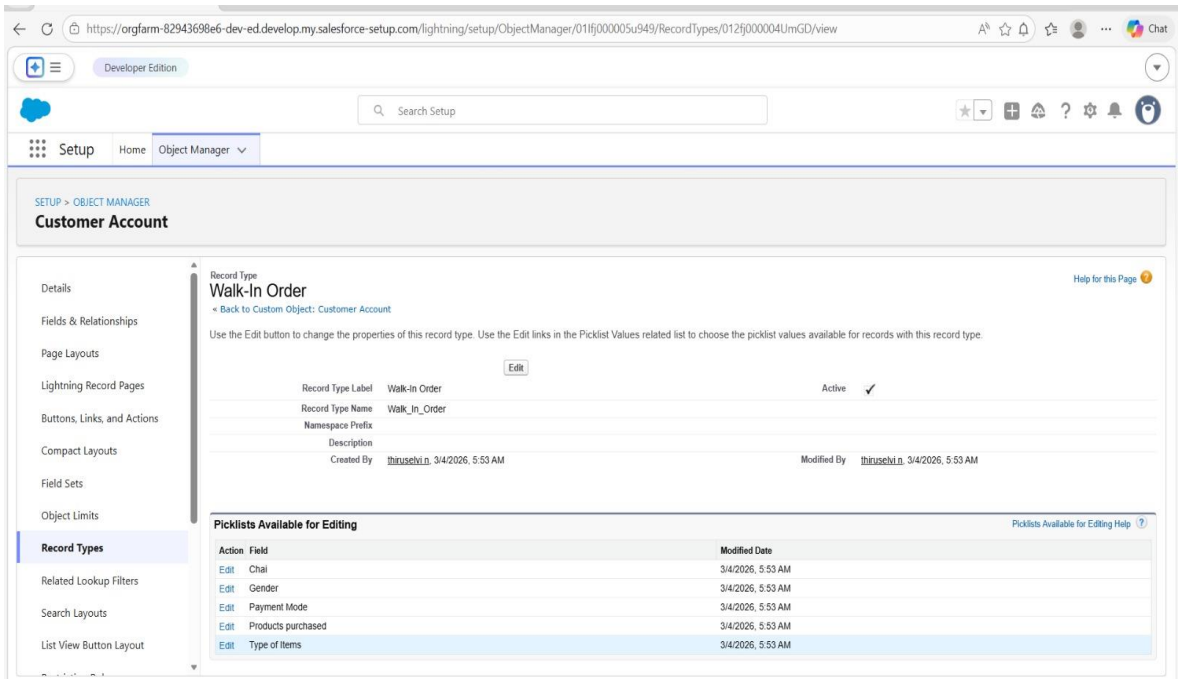


Milestone 8 - Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two different Record Types.
Online orders and Walk-In orders.

Walk-In Orders Record Type





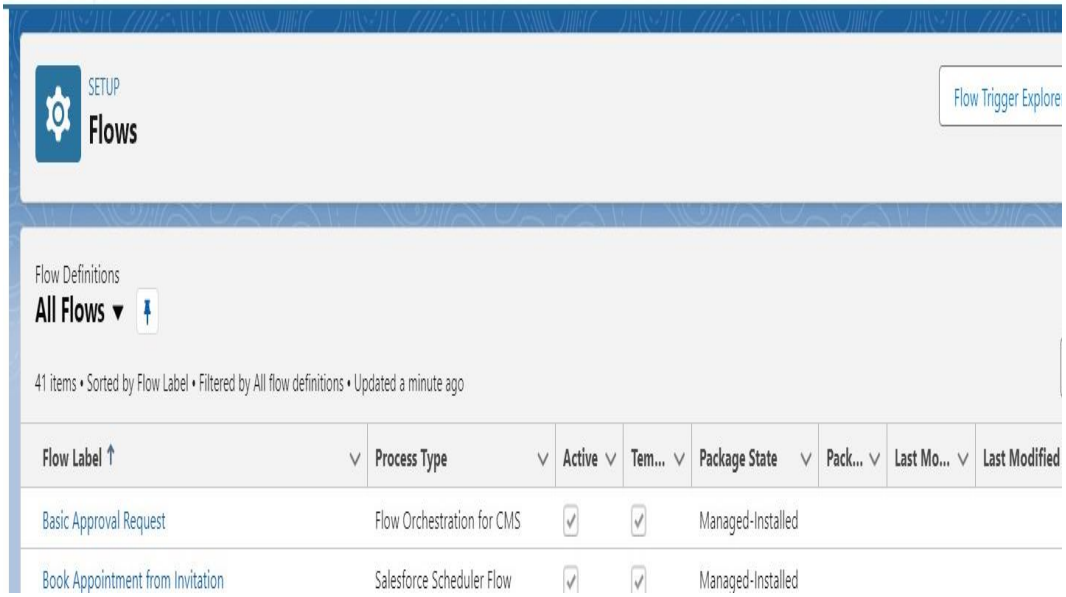
Milestone 9 - Validation Rules

On Employer Account

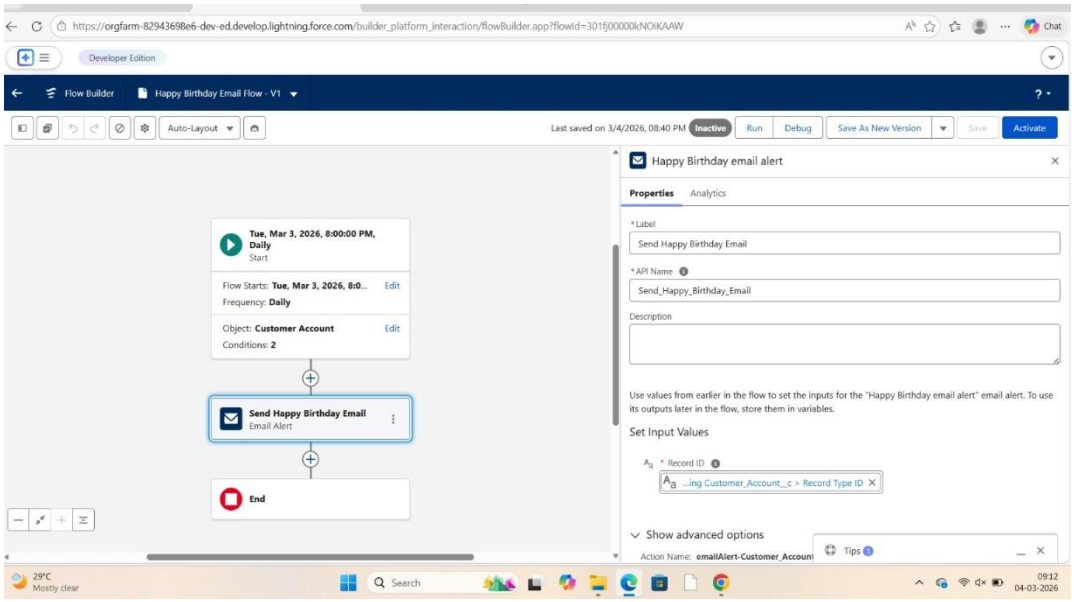
Milestone 10 - Email Template

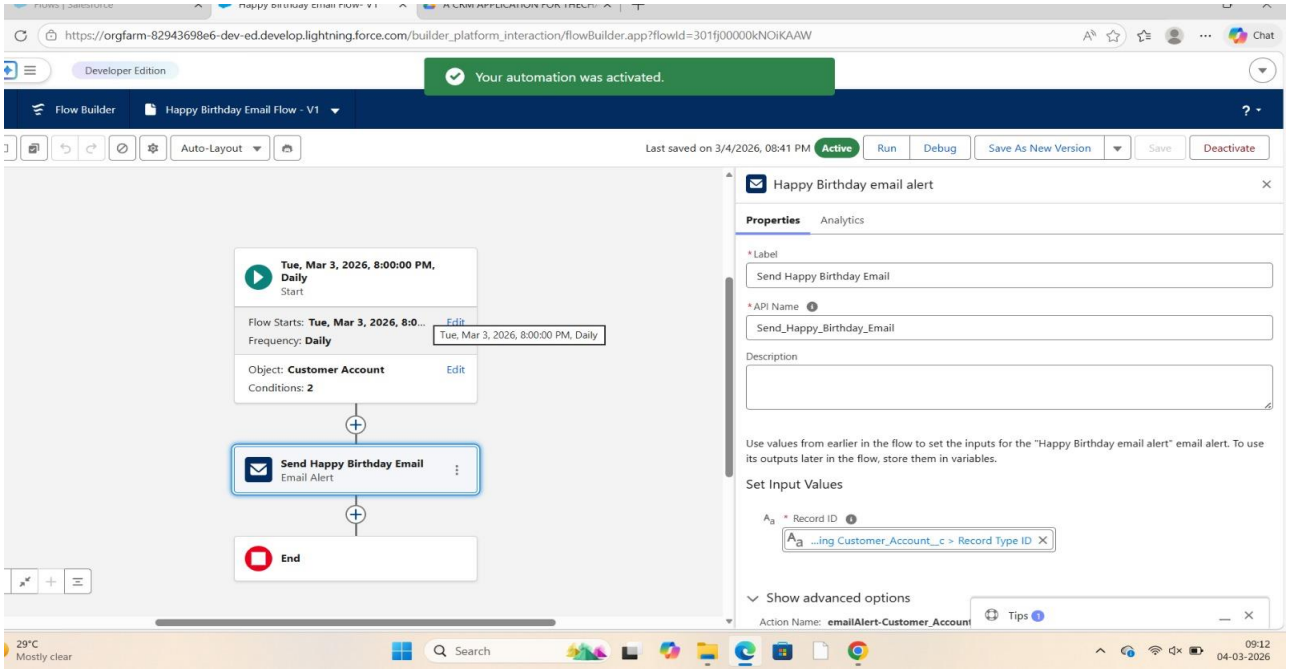
Email Template

Milestone 11 – Flows (Schedule Triggered Flow)

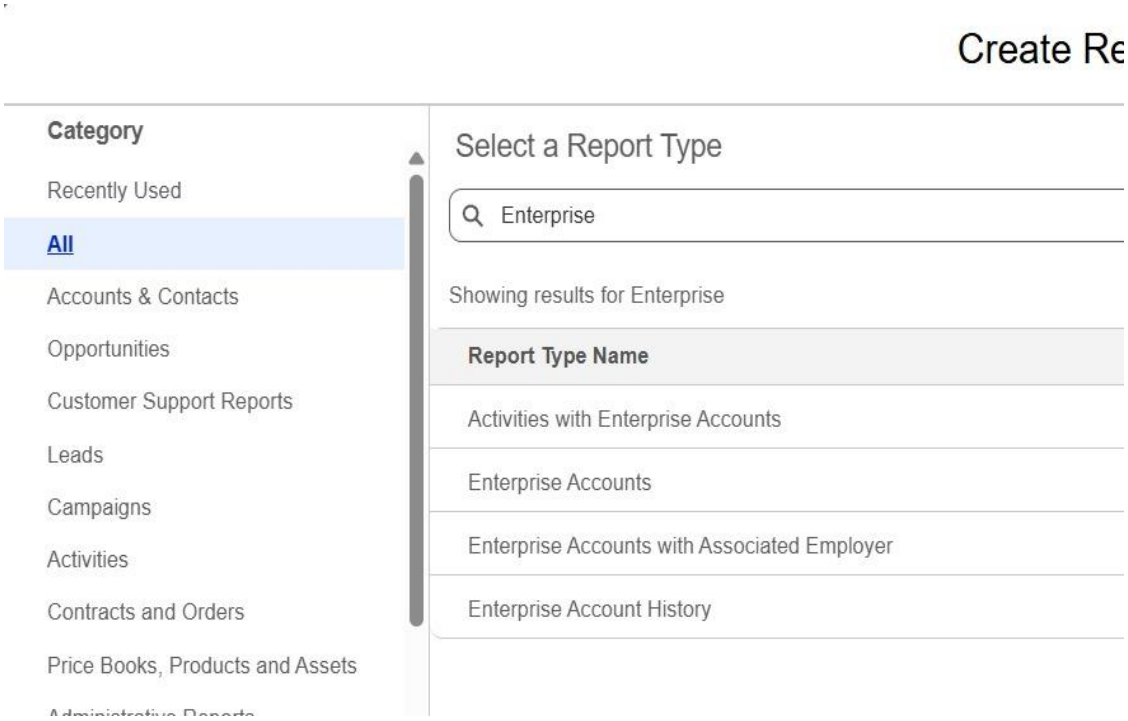


Flow Builder



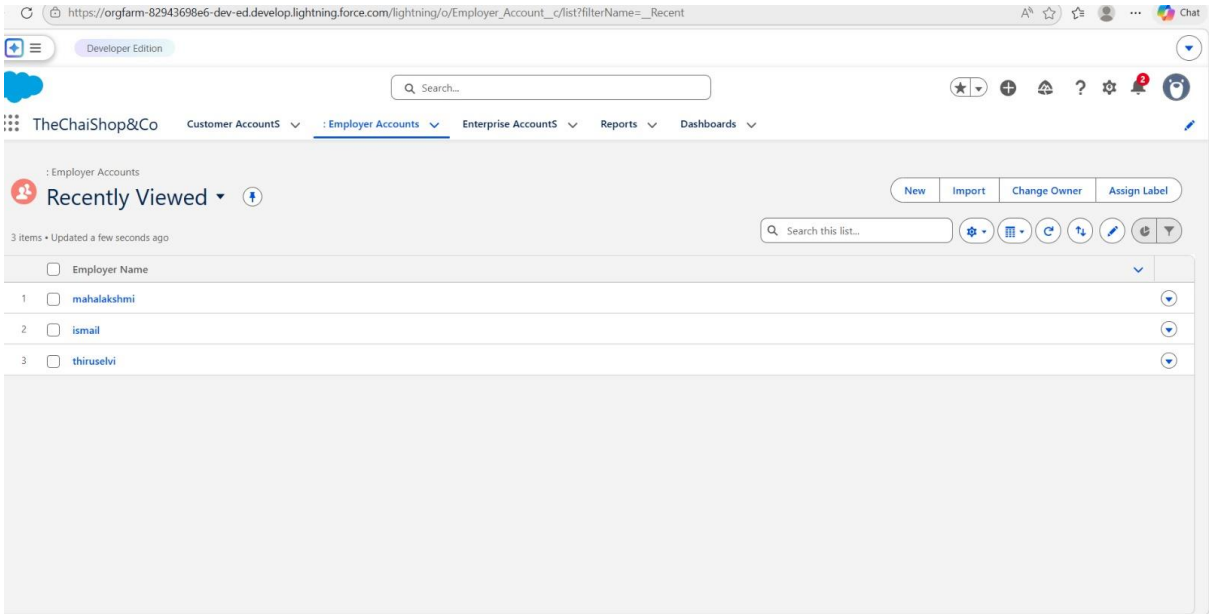


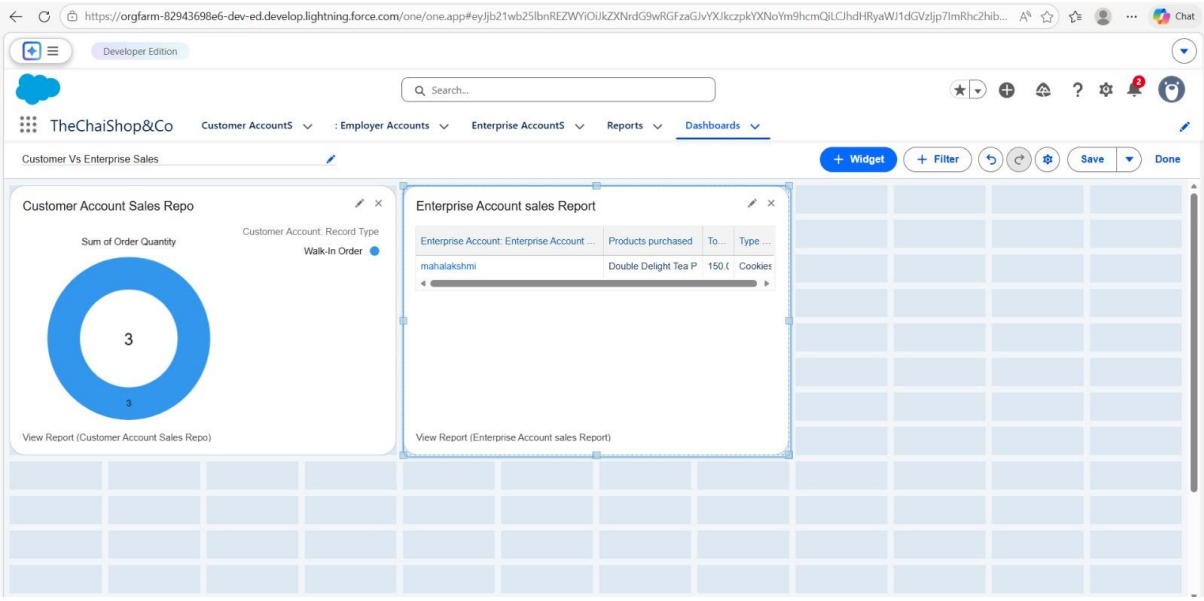
Creating Report



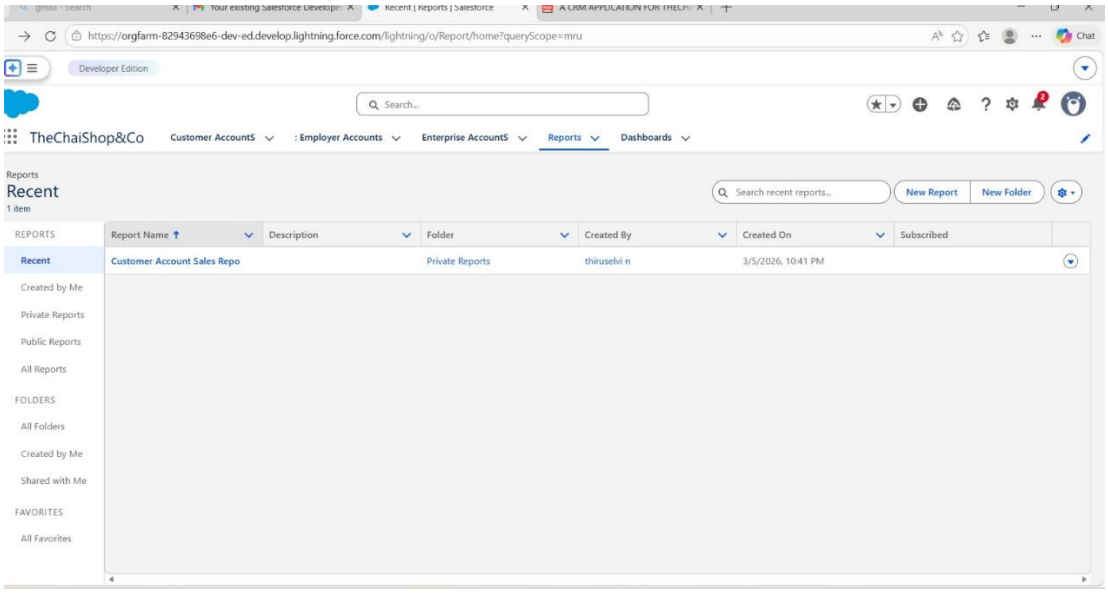
The ChaiShop & Co

Customer Accounts

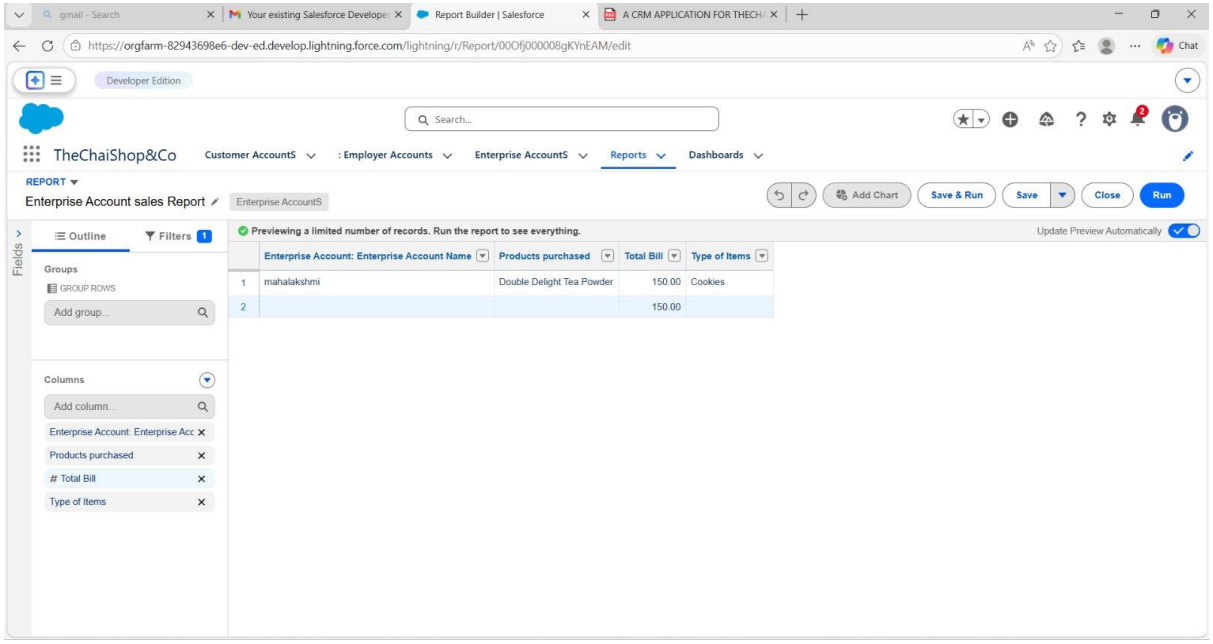




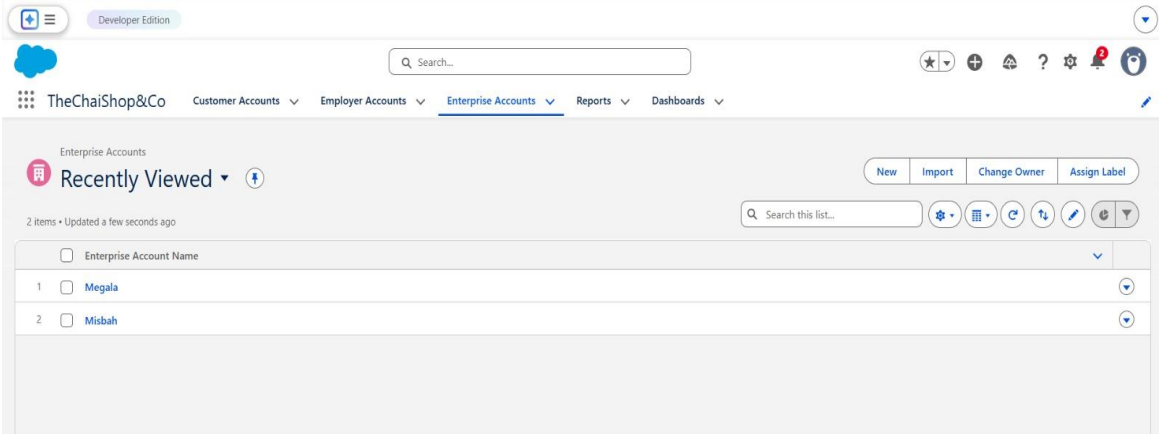
Employer Accounts



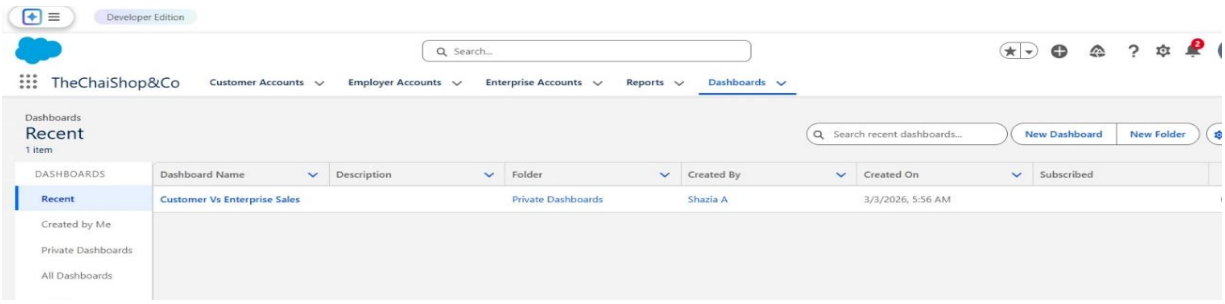
Enterprise Accounts



Reports



Dashboard



Milestone 12 - Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

1. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement
- Real-time analytics

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

2. Conclusion:

The CRM Application for TheChaiShop&Co successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The system reduces errors, saves time, and enhances customer relationships through automation and analytics.

3. FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts
- Inventory management
- Multi-branch support
- Advanced customer profiling
